Menlo Park Notebook #127 [N-80-00-05]

This is the first of three notebooks that contain the results of a search, conducted by Otto Moses during the summer of 1880, for literature relating to the electric light. (See also Menlo Park Notebooks #128 and #176.) The citations are listed in alphabetical order by author. There are three sets of listings, beginning on pages 1, 136, and 220. The book contains 284 numbered pages.

Blank pages not filmed: 228-284.
